

CAS Number: 71-36-3

Other Names: Butan-1-ol; Butyl alcohol; Butyl hydrate;
1-Hydroxybutane; n-Propylcarbinol

Formula: C₄H₁₀O

PRODUCT INTRODUCTION

Normal butanol (n-butanol) is a primary alcohol with a molecular formula of C₄H₁₀O. N-butanol is a colourless liquid of medium volatility and a characteristic banana-like odour. It only has limited miscibility in water, however is easily soluble in regular solvents such as ethers, alcohol, glycols and hydrocarbons. This solvent is very flammable. The major use n-butanol is in the industrial arena.

PHYSICAL AND CHEMICAL PROPERTIES

Purity (%)	99.9095
I-Butanol (%)	0.0355
Color (APHA)	< 0.6
Water (%)	0.0350
Acidity (as Acetic Acid) (%)	0.0001
Aldehydes (as Carbonyl, C=O)	0.0008
Sulfuric Acid Color (APHA)	< 0.6

APPLICATIONS

- n-butanol can be used a chemical intermediate to create other chemicals (e.g. Esters, n-butyl acetate and amino resins); alternatively it can be used as a solvent in the creation of consumer products.
- n-butanol is used as a solvent for paints, coatings, varnishes, fats, oils, waxes, rubber and plasticizers.
- Other uses include coating fabric in the textiles industry, as a cleaning or polishing agent, gasoline, and brake fluid and in consumer products such as make-up, nail products, hygiene products and shaving products in the cosmetic industry.
- The main user end market of this product is the chemical, petrochemical, textiles, cleaning and cosmetics industries.
